BASEMENT WATERPROOFING: SikaProof® A 12, FLEXIBLE POLYOLEFIN, BASEMENT
WATERPROOFING SYSTEM

BUILDING TRUST

AKBATI RESIDENTIAL COMPLEX – ISTANBUL, TURKEY

PROJECT

The Akbati Residence Project in Istanbul included of a approximately 6,000 m² great basement. The construction consists of a base slab with a simple rectangular shape and single faced-formwork wall area.

PROJECT REQUIREMENTS

The main demand of the customer was to waterproof the hole basement structure with a simple flexible sheet waterproofing system. Further the customer needs a suitable waterproofing solution for vertical single-faced formwork of the walls. SikaProof® A system has been choosen due to its flexibility, mechanical and physical performance and its full bonding. The ease of detailing, speed of application and the high safety in case of a failure, this were the main arguments for the customer to use the fully bonded waterproofing system SikaProof® A.

AKBATI RESIDENTIAL COMPLEX, TURKEY
