

SIKA AT WORK

YURA WHITE CEMENT

CONCRETE: SikaGrind®-242 Optimizer PE

BUILDING TRUST

YURA WHITE CEMENT

COMPANY DESCRIPTION

Yura S.A. is the leading cement company in southern Peru. In 2025, the company launched its new white cement, a state-of-the-art product manufactured under the strict standards required by the cement industry, offering high strength, high whiteness, and greater workability. It is mainly used for architectural finishes, adhesives, mortars, terrazzo, swimming pools, and other applications.

PLANT REQUIREMENTS

The company Yura S.A. required a grinding aid for the production of white cement to increase the ball mill production and prevent the formation of coating on the grinding balls. Furthermore, the chemical product should not affect the color of the white cement, which is one of its main commercial characteristics.

SIKA SOLUTIONS

The Sika technical team worked together with Yura S.A. to develop customized additives using the cement samples provided. After several laboratory testing and industrial validation, SikaGrind®-242 Optimizer PE was determined to be the best option. It is an effective grinding aid for optimizing the productivity of grinding systems without affecting the appearance properties of the white cement produced.

PROJECT PARTICIPANTS

Owner: YURA S.A.
 Plant: Yura, Arequipa, Perú
 Supplier: Sika Peru S.A.C.

Any product name or reference reflects the Sika product name at the time of creation of this document and may differ from the product name or reference during past events.

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
