ZOTT COMPANY IN GÜNZBURG, GERMANY

EXTREMELY FAST FLOOR REFURBISHMENT: Sikafloor® PurCem®

BUILDING TRUST

EXTREMELY FAST FLOOR REFURBISHMENT IN A DAIRY

PROJECT DESCRIPTION

Manufacturing of premium products requires first-class production conditions. This was also the implicit requirement of the tradition-rich Bavarian family enterprise Zott, third generation producers of yoghurt, dessert and cheese specialties for domestic and international customers. In the production location in Günzburg, the Zott company runs a factory shop and produces hard cheese, among other products.

PROJECT REQUIREMENTS

Damaged tile flooring – fixed with epoxy based tile adhesive – was to be refurbished and replaced by a seamless, chemical, temperature and slip resistant flooring system. Heavy production machinery had to be assembled on the floor after the refurbishment. The work was needed to be done during the weekend in 2014, and therefore available total time for the work was only two days.

SIKA SOLUTION

First, the old tile floor assembly was removed. The existing structural floor slab was prepared mechanically and primed with Sikafloor®-161.

Then, a bonding layer of SikaScreed®-10BB was applied. Afterwards, SikaScreed® HardTop-80, a fast-curing, industrial floor screed, was applied for levelling and repair. Then, 24 hours after the screed application, followed the application of polyurethane cement based, heavy-duty Sikafloor®-20 PurCem® flooring system. Sikafloor®-20 PurCem® flooring withstands the harsh continuous water and chemical stresses of the dairy environment. The new floor could be used on the following day after the coating process.
